

ListBox, Combobox (LISTS in VBA) Principles for Rows/Columns:

(Special thanks to Brian Hayden for this image)

	Column 0	Column 1
Row 0	Item 0	Item 0
Row 1	Item 1	Item 1
	Item 2	Item 2

- To refer to an item in a particular column use the following style:
 - LIST (row number of item, column number of item).
 - **REMEMBER THAT YOU START THE COUNTING AT 0:**
 - **The first column is Column 0, the second column is Column 1 etc!**
 - **Similarly, the first row item is item 0, the second is item 1 etc**
- The yellow item is the second row item in the first column. Since we always start with 0, this item would be referred to as follows [using the LIST (row number of item, column number of item) style]: LIST(1,0)
